GOT PAIN?

Complete Joint Therapy In One Easy To Take Capsule

Do you suffer from back, knee and/or neck pain? Cartilage makes up about 25% of the spine's length and below each vertebrae in the spine you will find cartilage. Rehabilitate and strengthen your neck and back with **ArthroAid Plus™**.

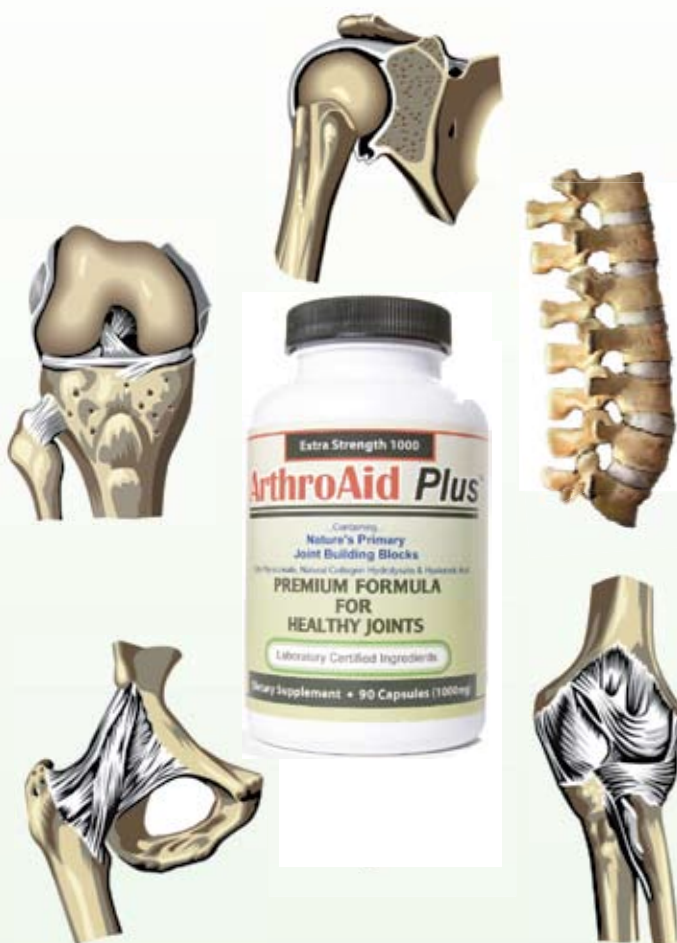

One Natural Pain Reliever, Five Joint Building Blocks, One Powerful Nutraceutical

CM Complex
with **Cetyl Myristoleate**

**Joint Cartilage
Rehabilitation**

Hyaluronic Acid (HA)
**Joint Cartilage Fluid
Skin Nourishment**

White Willow Bark Extract
**Pain Relief
Anti-inflammatory**

Collagen Hydrolysate

**Joint Cartilage
Builder**

Glucosamine Sulfate

**Joint Cartilage
Builder**

MSM (methylsulfonylmethane)

**Joint Cartilage Care
Skin Nourishment**

Chondroitin Sulfate

Joint Cartilage Fluid

ArthroAid Plus™

Each Capsule

"Packed with Research and Science"

For over 10 years Nutra Research has provided premium products exclusively through professional healthcare providers.

The Research and Science is in the the Human Clinical Studies

Taking 3 capsules a day of **ArthroAid Plus** gives you the following premium ingredients supported by the exclusive research and science relating to joint care and rehabilitation.

Glucosamine Sulfate (1500mgs.) - (GS) is an amino sugar and a main biological chemical that helps build all the major cushioning ingredients of the synovial fluids and surrounding tissues in joints. Scientific research shows that (GS) helps produce glycosaminoglycans. Simply put, glycosaminoglycans are like the mortar that holds collagen fibers of the cartilage structure together. In addition, (GS) is required for the synthesis of hyaluronic acid by the synovial membrane of the joint. (HA) increases the viscosity of the synovial fluid and serves to reduce the wear and tear stress on the articular cartilage and related joint structures. Therefore the combination of the natural (GS) and (HA) and Collagen in ArthroAid Plus presents a powerful set of building blocks for healthy joints.

CM Complex with Cetylmyristoleate (624mgs.) - Discovered by a research scientist at the National Institute of Health, cetylmyristoleate is one of the unique fatty acid esters found naturally in our CM Complex. Multiple human clinical trials have shown that this CM Complex of unique fatty acid esters has helped relieve joint pain and increase mobility while causing no side effects compared to a placebo group. In the most recent study published in the 2005 Journal; Food Science and Nutrition (vol. 10, pgs. 285-289) a double-blind, placebo-controlled human clinical trial of arthritic patients showed a 70% and 53.8% improvement in arthritic symptoms after a 3 month trial period.

Collagen Hydrolysate (360mgs.) - Collagen is the main protein found in articular cartilage. Hydrolyzed Collagen is a unique protein, containing high amounts of important amino acids for joint health. This unique form of collagen has gone through extensive manufacturing research and development to provide a very low molecular weight ingredient which provides easier absorption. Collagen is a main building block in healthy cartilage.

Chondroitin Sulfate (200mgs.) - Articular cartilage has no blood supply so all of it's nutrients and lubrication come from the liquid that flows in and out of the cartilage. Chondroitin Sulfates act like "liquid magnets", without this fluid cartilage would become malnourished, drier and more brittle. (CS) helps provide a synergistic matrix of joint building ingredients.

MSM (150mgs.) - This is a natural form of organic sulfur that is found in all living organisms. Unfortunately, we lose much of this important nutrient when we process our foods. It is imperative that our bodies have enough dietary sulfur to assist in the synthesis of collagen and other important cell structures.

White Willow Bark Extract (100mgs.) - The white willow bark has been used for centuries as a natural pain reliever. The salicylic acid in white willow bark lowers the levels of prostaglandins, hormone like compounds that can cause aches, pain, and inflammation. Because the body metabolizes the salicylic acid differently than aspirin it doesn't cause stomach bleeding or other detrimental side effects.

Hyaluronic Acid (HA) (10mgs.) - Synovial fluid is made up of molecules of Hyaluronic Acid (HA) that enable cartilage to glide smoothly. Published clinical studies have confirmed that (HA), is safe and effective in relieving pain and stiffness in joints and encourages overall joint health in adults. (HA) is an important component of healthy articular cartilage.
